SUMMARY

Resourceful Full stack & AI developer with 2+ years of experience in frontend, backend development. Skilled in Express, Node.js, React, MongoDB database and AI integration with frontend interfaces. experience in front-end and back-end development, proficient in leading cross- functional teams, skilled in project management, agile methodologies, and in software engineering.

TECHNICAL SKILLS

- **Front-end development** - JavaScript, TypeScript, React JS, Redux js, Next JS 14
- **Back-end development** - Node js, Express js, MongoDB, Redis, Razorpay integration
Generative AI (using Ollama / llama3), CI/CD pipeline
- **Other technical skills** - Git, GitHub, SEO, DSA (Data Structures and Algorithms)

EDUCATION

- Master in Computer Applications from Lovely professional University **2025 - 2027**
- Bachelor of Computer Applications from Punjab Technical University **8.0 CGPA**

WORK EXPERIENCE

Full stack developer - QuadB Technologies Pvt. Ltd. June 2024 - Present

- Designed, deployed, optimized, scaled, and maintained web applications using MERN stack and Web3.
- Integrated Web3 ICP blockchain using Rust to create canisters for fungible and non-fungible tokens (NFT).
- Managed client communication, including meetings to gather requirements and provide updates.
- System Design Based on Client Documentation and Requirements to Ensure Accurate Flow Development.

Full stack developer - Excellence Technologies Pvt. Ltd. Oct 2023 - May 2024

- Developed RESTful APIs with JWT and bcrypt encryption to ensure optimized and robust backend security
- Establish and Optimize Database Connections with Backend for Seamless Performance
- Built responsive, high-performance, and scalable websites with React, Redux Toolkit, and Tailwind CSS.
- Proven ability to multitask and seamlessly integrate APIs using the Fetch method, Axios, and asyncThunk.

PROJECTS

SDK : ICP SDK for Contract Deployment [Deployed link](#)

- Crate simple SDK tool using the node js for ICP chain to deploy smart contracts on the mainnet without needing WSL or a complicated setup. It works smoothly on all the operating systems and includes built-in gas fee (cycle) management, ensuring a hassle-free experience for easy project deployment on the mainnet.

Technology Stack: Node js, Rust, difinity/agent, commander, Shelljs.

XPedition – Marketing Quest Reward App

[Deployed link](#)

- Designed and developed a gamified quest-based application that turns daily marketing actions into XP points and real-world rewards. Targeted at content creators, growth hackers, and digital marketers, the app assigns daily tasks without any registration fee or task payment. Users earn XP for completing quests and compete on weekly/monthly leaderboards. Top performers receive exclusive rewards like goodies, cashback, and merchandise. Focused on community engagement and user retention through smart gamification strategies.

Technology Stack : React js, Redux js, Node js, Express js, Express js, Postgress, Google Cloud Platform.

OpenxAI – AI Infrastructure

[Deployed link](#)

- Enabled developers to publish, deploy, and monetize AI models in a decentralized ecosystem. Worked on feature demos and release updates (v4.5) showcasing GPU marketplace monetization and tokenized resource management in the Studio. Created walkthroughs, reference implementations, and guides to simplify adoption of OpenXAI's Web3 infrastructure. Contributed to improving Studio workflows for model publishing, versioning, and real-time compute tracking.

Technology Stack : Next js, Node js, Express js, ollama , llama 3 model, IPFS for storing data

Decentralized Organization Tool (DAO)

[Deployed link](#)

- Developed a DAO application on the ICP blockchain, enabling users to create multiple decentralized governance and autonomous operations applications without technical expertise. Designed for tokenization, voting, and smart contract-based decision-making. Built the backend with Rust on ICP blockchain, allowing seamless member management, token distribution, on-chain user data storage, and proposal submission for tasks.

Technology Stack : Rust, ICP, React js, Redux js, React-Quary

E-commerce APP

[Deployed link](#)

- Developed a full-stack e-commerce web application using the MERN stack. The app allows users to browse and purchase products, while admins can list, manage, and perform CRUD operations on products and user data. Integrated secure user authentication, product search filters, shopping cart functionality, and order management. Implemented Razorpay for secure transactions and added an order tracking system for both customers and sellers. The admin panel includes analytics to monitor sales, user activity, and product performance.

Technology Stack : React, Redux js, React-Quary, Node js, express js, postgresss, Razorpay.

DocsBot (AI based)

[Deployed link](#)

- Developed an AI-driven platform that allows users to create multiple bots, each generating responses based on the data provided by the bot owner. Implemented a service purchase system enabling users to buy services, create custom AI bots, and provide data for the bots to read and generate responses from the provided documents—all without requiring any coding knowledge.

Technology Stack : OpenAI, Firebase, Express js, Node js, React js, MUI, Redux js, React-Quary.

EXTRACURRICULAR CONTRIBUTIONS

Responsibilities

- Optimized code to enhance performance , ensuring high-quality software delivery within time constraints.

Achievements

- Ranked among the top 3 students in the college, securing the first position in problem-solving in DSA.
